1986 Gypsy Moth Monitoring - Monongahela National Forest

Forest Supervisor,
Monongahela National Forest

The enclosed map shows the gypsy moth male moth trapping sites FPM, MFO, established on the Cheat, Potomac and Greenbrier Ranger Districts during late May and early June 1986. Not shown are the locations of the 10 traps placed by District personnel on the Greenbrier Ranger District south of US 250, and the 25 traps placed by District personnel each on the Marlinton, Gauley, and White Sulphur Ranger Districts. All trap sites will be shown on a map in the final report to be prepared by early September.

Please note that the traps should be retrieved by those personnel who placed them by August 15, rather than after that date as stated in an earlier memo. The change is due to the much earlier than normal male moth flight this year. All traps collected by Ranger District personnel should be placed in a large plastic bag. I will arrange with each Ranger District to pick up this bag of traps and a map showing where the traps were placed, if this has not already been sent to us.

Thanks for your cooperation in the conduct of this important survey.
